AUTHOR INDEX

Volumes 104, 105, 106, and 107, 1996

ABE, T.: see Hidaka, Y.

ADOMEIT, G.: see Bielert, U.

AKSELVOLL, K.: see Bruneaux, G.

ALBALDEJO, J.: see Martinez, E.

ALDREDGE, R. C.
Premixed Flame Propagation in a High-Intensity, Large-Scale Vortical Flow, 106: 29

ALDUSHIN, A. P., MATKOWSKY, B. J., and SCHULT, D. A.
Downward Buoyant Filtration Combustion, 107: 151

ALEXIOU, A., and WILLIAMS, A.
Soot Formation in Shock-Tube Pyrolysis of Toluene, Toluene–Methanol, Toluene–Ethanol, and Toluene–Mixtures, 104: 51

ALKAM, M. K., PAI, V. M., BUTLER, P. B., and PITZ, W. J.
Methanol and Hydrogen Oxidation Kinetics in Water at Supercritical States, 106: 110

ANDERSON, S. L.: see Smolanoff, J.

ANNASWAMY, A. M.: see Fleifil, M.

ARAKI, N.: see Chelliah, H. K.

ARISAWA, H., and BRILL, T. B.
Flash Pyrolysis of Hydroxyl-Terminated Polybutadiene (HTPB) I: Analysis and Implications of the Gaseous Products, 106: 131

ARISAWA, H., and BRILL, T. B.
Flash Pyrolysis of Hydroxyl-Terminated Polybutadiene (HTPB) II: Implications of the Kinetics to Combustion of Organic Polymers, 106: 144

ASHURST, W. T.: see Helenbrook, B. T.

BABUSHOK, V., NOTO, T., BURGESS, D. R. F., HAMINS, A., and TSANG, W.
Influence of CF_3I, CF_3Br, and CF_3H on the High-Temperature Combustion of Methane, 107: 351

BAJAJ, P. N., and FONTIJN, A.
A Flow-Reactor Mass-Spectrometer Investigation of the Initiation Steps of the $O(^3P)$ Atom Reaction with Benzene, 105: 239

BALAKRISHNAN, G.: see Sánchez, A. L.

BARAT, R. B.: see Mao, F.

BARDON, M. F.: see Rao, V. K.

BARLOW, R. S.: see Nguyen, Q. V.

BARLOW, R. S., and CARTER, C. D.
Relationships among Nitric Oxide, Temperature, Mixture Fraction in Hydrogen Jet Flames, 104: 288

BAR-ZIV, E.: see Kantorovich, I. I.

BAR-ZIV, E.: see Zhang, X.

BAUM, H. R.: see McGrattan, K. B.

BAYLESS, D. J., SCHROEDER, A. R., OLSEN, M. G., JOHNSON, D. C., PETERS, J. E., KRIER, H., and BUCKIUS, R. O.
The Effects of Cofiring Natural Gas and Coal on Sulfur Retention in Ash, 106: 231

BECHTOLD, J. K.: see Im, H. G.

BÉDAT, B., and CHENG, R. K.
Effects of Buoyancy on Premixed Flame Stabilization, 107: 13

BENZ, P.: see Schlegel, A.

BHAT, R. K.: see Prabhu, S. K.

BHATTACHARJEE, S., WEST, J., and DOCKTER, S.
A Simplified Theory for de Ris Flames Over Thick and Thin Fuel Beds, 104: 66

BIDABADI, M.: see Goroshin, S.

BIELERT, U., KLUG, M., and ADOMEIT, G.
Application of Front Tracking Techniques to the Turbulent Combustion Processes in a Single Stroke Device, 106: 11

BILGER, R. W.: see Brizuela, E. A.

BILGER, R. W: see Stårner, S. H.

BOCKHORN, H.: see Schlegel, A.

BOEHM, S.: see Lahaye, J.

BRADLEY, D., GASKELL, P. H., and GU, X. J.
Burning Velocities, Markstein Lengths, and Flame Quenching for Spherical Methane–Air Flames: A Computational Study, 104: 176

BRAY, K. N. C., CHAMPION, M., and LIBBY, P. A.
Extinction of Premixed Flames in Turbulent Counterflowing Streams with Unequal Enthalpies, 107: 53

BRAY, K. N. C., CHAMPION, M., and LIBBY, P. A.
Premixed Combustion in Laminar Couette Flow, 104:241

BREITUNG, W.: see Dorofeev, S. B.

BRILL, T. B.: see Arisawa, H.

SUBJECT INDEX

Volumes 104, 105, 106, and 107, 1996

1. ASYMPTOTIC ANALYSES
- Application of Rate-Ratio Asymptotics to the Prediction of Extinction for Methanol Droplet Combustion, 105: 267
- Asymptotic and Numerical Study of Diffusion Flames with Variable Lewis Number and Finite Rate Chemistry, 104: 111
- Burning Velocities, Markstein Lengths, and Flame Quenching for Spherical Methane–Air Flames: A Computational Study, 104: 176
- Downward Buoyant Filtration Combustion, 107: 151
- An Elementary Discussion of Forward Smoldering, 104: 300
- Forced Forward Smolder Combustion, 104: 1
- Influences of Flame–Vortex Interactions on Formation of Oxides of Nitrogen in Curved Methane–Air Diffusion Flames, 105: 373
- Premixed Combustion in Laminar Couette Flow, 104: 241
- Response of Counterflow Premixed Flames to Oscillating Strain Rates, 105: 358
- Theoretical Determination of the Critical Conditions for the Direct Initiation of Detonations in Hydrogen–Mixtures, 104: 401

2. COMBUSTION IN PRACTICAL SYSTEMS
- Application of Front Tracking Techniques to the Turbulent Combustion Processes in a Single Stroke Device, 106: 11
- Catalytic Stabilization of Lean Premixed Combustion: Method for Improving NO_x Emissions, 105: 322
- Combustion Fundamentals of Fire Book Review: Edited by Geoffrey Cox, 105: 600
- Comparative Evaluation of Municipal Solid Waste Incinerator Designs by Flow Simulation, 106: 241
- Effect of Swirl on Combustion in a Short Cylindrical Chamber, 106: 318
- The Effects of Cofiring Natural Gas and Coal on Sulfur Retention in Ash, 106: 231
- Flame Propagation in Mixtures of H_2 and Air in a Tube with a Moving Water Film on the Tube's Walls, 107: 45
- Fuel–Gas Injection to Reduce N_2O Emissions from the Combustion of Coal in a Fluidized Bed, 107: 103
- The Influence of Fuel Composition on Emissions of CO, NO, and NO_2 from a Gas-Fired Pulsed Combustor, 104: 419
- Infrared Measurements of Soot Formation in Diesel Sprays, 107: 271
- Modeling NO_x Release from a Single Coal Particle II. Formation of NO from Char-Nitrogen, 106: 207
- Modeling of Chemical Reactions in Afterburning for the Reduction of N_2O, 106: 345
- Nitrous Oxide Emissions, 107: 453
- The Rate of Temperature Rise of a Subbituminous Coal During Spontaneous Combustion in an Adiabatic Device: The Effect of Moisture Content and Drying Methods, 106: 261
- Synthesis and Restructuring of Inorganic Nanoparticles in Counterflow Diffusion Flames, 107: 85

3. COMBUSTION STABILITY/INSTABILITY
- Chemical Kinetic Simulation of Hydrocarbon Oxidation Through the Exhaust Port of a Spark Ignition Engine, 107: 383
- The Effects of Cofiring Natural Gas and Coal on Sulfur Retention in Ash, 106: 231
- On the "Tulip Flame" Phenomenon, 105: 225

4. COMBUSTION SYSTEMS: ANALYTIC AND NUMERICAL DESCRIPTIONS
- Acoustic Instability of a Premixed Flame Propagating in a Tube, 107: 245
- Analytic Description of the Evolution of Two-Dimensional Flame Surfaces, 107: 114
- Application of Rate-Ratio Asymptotics to the Prediction of Extinction for Methanol Droplet Combustion, 105: 267
- Assessment of Turbulent Combustion Submodels Using the Linear Eddy Model, 104: 343

Stochastic Description of Premixed Turbulent Combustion in Terms of a Coarse-Grained Flame Surface Density, 106: 369
Turbulence Modulation in Jet Diffusion Flames: Modeling and Experiments, 106: 301

6. COMBUSTION SYSTEMS: NEW
Simulation of Turbulent Burning Velocities Using Aqueous Autocatalytic Reactions in a Near-Homogeneous Turbulence, 105: 54

7. DETONATIONS: CONDENSED PHASE AND HETEROGENEOUS
Study of the Fast Reaction Characteristics of Aluminized PETN Explosive Powders, 105: 428

8. DETONATIONS: GAS PHASE
Deflagration to Detonation Transition in Large Confined Volume of Lean Hydrogen–Air Mixtures, 104: 95
Laser-Induced Incandescence Calibration via Gravimetric Sampling, 105: 462
Modeling Flows with Curved Detonation Waves, 104: 219
Numerical Modeling of Chemistry and Gas Dynamics During Shock-Induced Ethylene Combustion, 104: 311
Theoretical Determination of the Critical Conditions for the Direct Initiation of Detonations in Hydrogen– Mixtures, 104: 401

9. DIAGNOSTICS: LASER
Concentration and Temperature Measurements in a Laser-Induced High Explosive Ignition Zone. Part I: LIF Spectroscopy Measurements, 105: 381
The Detailed Flame Structure of Highly Stretched Turbulent Premixed Methane–Air Flames, 107: 223
Effect of Spatial Averaging on CARS-Derived Temperatures, 106: 511
The Elusive History of $\tilde{m} = 1.57 - 0.56i$ for the Refractive Index of Soot, 107: 314
Experimental Study of Extinction of Nonadiabatic Counterflow Premixed Flames, 105: 308
Laser-Induced Incandescence Calibration via Gravimetric Sampling, 105: 462
Laser-Induced Incandescence Measurements of Soot Production in Steady and Flickering Methane, Propane, and Ethylene Diffusion Flames, 107: 418
Mixture Fraction Imaging in a Lifted Methane Jet Flame, 107: 307

Raman-LIF Measurements of Temperature, Major Species, OH, and NO in a Methane–Air Bunsen Flame, 105: 499
Simultaneous Scalar/Velocity Field Measurements in Turbulent Gas-Phase Flows, 107: 1

10. DIAGNOSTICS: OPTICAL AND PHOTOGRAPHIC
The Detailed Flame Structure of Highly Stretched Turbulent Premixed Methane–Air Flames, 107: 223
Direct Measurements of Burning Velocity of Propane–Air Using Particle Image Velocimetry, 106: 363
Effect of Spatial Averaging on CARS-Derived Temperatures, 106: 511
Further Studies on Effects of Thermophoresis on Seeding Particles in LDV Measurements of Strained Flames, 105: 189
Influence of Strain Rate and Fuel Dilution on Laminar Nonpremixed Hydrogen–Air Flame Structure: An Experimental Investigation, 107: 125
Measurements of Particle Flame Temperatures Using Three-Color Optical Pyrometry, 104: 272
Simulation of Turbulent Burning Velocities Using Aqueous Autocatalytic Reactions in a Near-Homogeneous Turbulence, 105: 54
Simultaneous Scalar/Velocity Field Measurements in Turbulent Gas-Phase Flows, 107: 1

11. DIAGNOSTICS: OTHER
Further Studies on Effects of Thermophoresis on Seeding Particles in LDV Measurements of Strained Flames, 105: 189
Species Measurements in a Hypersonic, Hydrogen–Air, Combustion Wake, 106: 478

12. EXPERIMENTAL TECHNIQUES OR RESULTS: BURNERS
Chemical Structures of Fuel-Rich Flames of trans-$C_2H_2Cl_2$/:CH_4/Ar/O_2 Mixtures, 104: 41
Combustion Measurements from an Impinging Radial Jet Reattachment Flame, 106: 69
Detailed Oxidation Kinetics and Flame Inhibition Effects of Chloromethane, 105: 291
Diagnostics and Modeling of Strained Fuel-Rich Acetylene/Oxygen Flames Used for Diamond Deposition, 105: 321
The Effect of Allene Addition on the Structure of a Rich:C_2/H_2/O_2/Ar Flame, 105: 451
Experimental Study of Extinction of Nonadiabatic Counterflow Premixed Flames, 105: 308
Flame Stretch Measurements During the Interaction of Premixed Flames and Kármán Vortex Sheets Using PIV, 105: 167
Formation of Polycyclic Aromatic Hydrocarbons (PAH) in Methane: Comparative New Results from Premixed Flames, 107: 141
Further Studies on Effects of Thermophoresis on Seeding Particles in LDV Measurements of Strained Flames, 105: 189
Influence of Strain Rate and Fuel Dilution on Laminar Nonpremixed Hydrogen–Air Flame Structure: An Experimental Investigation, 107: 125
Infrared Analysis of Flame-Generated PAH Samples, 105: 161
Low Pressure Flat Flame Studies of C_2F_4/O_2, 107: 475
Magnetic Support of Combustion in Diffusion Flames under Microgravity, 107: 187
Measured Lengths of Supersonic Hydrogen–Air Jet Flames—Compared to Subsonic Flame Lengths—and Analysis, 107: 176
Modeling and Measurements of Soot and Species in a Laminar Diffusion Flame, 107: 368
NO_x Emission and Major Species Concentrations in Partially Premixed Laminar Methane/Air Co-Flow Jet Flames, 105: 414
Numerically Predicted Structure and Burning Velocity of Premixed CO–Ar–O_2–H_2 Flames Inhibited by Cf_3H, 107: 72
An Observation of Near-Planar Spinning Premixed Flames in a Sudden Expansion Tube, 105: 180
On the Scalar Structure of Nonequidiffusive Premixed Flames in Counterflow, 106: 168
On the Structure of Nonsooting Counterflow Ethylene and Acetylene Diffusion Flames, 107: 321
Raman-LIF Measurements of Temperature, Major Species, OH, and NO in a Methane–Air Bunsen Flame, 105: 499
Relationships among Nitric Oxide, Temperature, Mixture Fraction in Hydrogen Jet Flames, 104: 288
Soot Formation in Hydrocarbon/Air Laminar Jet Diffusion Flames, 105: 132
Stabilization of Premixed Flames on Rotating Bunsen Burners, 106: 467

13. EXPERIMENTAL TECHNIQUES OR RESULTS: PLUG FLOW REACTORS
A Detailed Kinetic Model of the High-Temperature Pyrolysis of Tetrachloroethene, 104: 260
A Detailed Kinetic Model of the High-Temperature Pyrolysis of Tetrachloroethene (Erratum), 107: 193
The Effect of Solid CaO on the Production of NO_x and N_2O in Fluidized Bed Combustors: Studies Using Pyridine as a Prototypical Nitrogenous Fuel, 105: 511
Ethane Oxidation at Elevated Pressures in the Intermediate Temperature Regime: Experiments and Modeling, 104: 505
A Flow-Reactor Mass-Spectrometer Investigation of the Initiation Steps of the $O(^3P)$ Atom Reaction with Benzene, 105: 239
The High-Temperature Pyrolysis of 1,3-Hexachlorobutadiene, 106: 1
The High-Temperature Pyrolysis of Hexachloropropene: Kinetic Analysis of Pathways to Formation of Perchloroarylbenzenes, 105: 486
Minimization of NO During Staged Combustion of CH_3NH_2, 105: 557
1-Pentene Oxidation and Its Interaction with Nitric Oxide in the Low and Negative Temperature Coefficient Regions, 104: 377
Release of NO from the Combustion of Coal Chars, 107: 336

14. EXPERIMENTAL TECHNIQUES OR RESULTS: QUASI-STATIC VESSELS

15. EXPERIMENTAL TECHNIQUES OR RESULTS: SHOCK TUBES
Determination of Ignition Delay Times in Mixtures of Ethylene Oxide, Oxygen, and Argon Behind a Reflected Shock, 106: 81
Effect of Confinement and Thermal Cycling on the Shock Initiation of LX-17, 105: 43
Shock Initiation of a Heated Ammonium Perchlorate-Based Propellant, 105: 123
Shock Tube and Modeling Study of Ketene Oxidation, 106: 155
Shock-Tube Modeling Study of Acetylene Pyrolysis and Oxidation, 107: 401
Soot Formation in Shock-Tube Pyrolysis of Toluene, Toluene–Methanol, Toluene–Ethanol, and Toluene–Mixtures, 104: 51
Species Measurements in a Hypersonic, Hydrogen–Air, Combustion Wake, 106: 478

16. EXPERIMENTAL TECHIQUES OR RESULTS: WELL STIRRED REACTORS
The Oxidation of Ethylene Oxide in a Jet-Stirred Reactor and Its Ignition in Shock Waves, 106: 62

17. FIRE OR EXPLOSION PHENOMENA, COMBUSTION SAFETY
Combustion Fundamentals of Fire Book Review: Edited by Geoffrey Cox, 105: 600
Deflagration to Detonation Transition in Large Confined Volume of Lean Hydrogen–Air Mixtures, 104: 95
An Experimental and Modeling Study of Fires in Ventilated Ducts. Part II: PMMA and Stratification, 104: 138
Flame Propagation in Mixtures of H_2 and Air in a Tube with a Moving Water Film on the Tube's Walls, 107: 45
On the "Tulip Flame" Phenomenon, 105: 225
The Pyrolysis of Para-Toluene Isocyanate, 107: 260
A Simplified Theory for de Ris Flames Over Thick and Thin Fuel Beds, 104: 66
Simulation and Moderation of the Thermal Response of Confined Pressed Explosive Compositions, 106: 428
Three-Dimensional Modeling for Prediction of Wall Fires with Buoyancy-Induced Flow along a Vertical Rectangular Channel, 105: 391

18. FLAME IGNITION OR STABILIZATION
Determination of Ignition Delay Times in Mixtures of Ethylene Oxide, Oxygen, and Argon Behind a Reflected Shock, 106: 81
Effect of Confinement and Thermal Cycling on the Shock Initiation of LX-17, 105: 43
Effects of Buoyancy on Premixed Flame Stabilization, 107: 13
Effects of Ignition and Wind on the Transition to Flame Spread in a Microgravity Environment, 106: 377
A Flame-Controling Continuation Method for Generating S-Curve Responses with Detailed Chemistry, 104: 328
Heating and Ignition of Combustible Dust Layers on a Hot Surface: Influence of Layer Shrinkage, 105: 471

Ignition in Nonpremixed Counterflowing Hydrogen versus Heated Air: Computational Study with Detailed Chemistry, 104: 157
Ignition of a Granular Propellant Bed, 106: 219
Numerical Simulation of Laser Ignition of an Isolated Carbon Particle in Quiescent Environment, 105: 591
The Oxidation of Ethylene Oxide in a Jet-Stirred Reactor and Its Ignition in Shock Waves, 106: 62
Relationships Between Bifurcation and Numerical Analyses for Ignition of Hydrogen–Air Diffusion Flames, 105: 569
Shock Initiation of a Heated Ammonium Perchlorate-Based Propellant, 105: 123
Stabilization of Premixed Flames on Rotating Bunsen Burners, 106: 467
Thermal and Concentration Fields of Burner-Attached Jet Flames in Cross Flow, 105: 211

19. FLAME QUENCHING OR EXTINCTION
Application of Rate-Ratio Asymptotics to the Prediction of Extinction for Methanol Droplet Combustion, 105: 267
Burning Velocities, Markstein Lengths, and Flame Quenching for Spherical Methane–Air Flames: A Computational Study, 104: 176
The Detailed Flame Structure of Highly Stretched Turbulent Premixed Methane–Air Flames, 107: 223
The Effect of Liquid Mass Transport on the Combustion and Extinction of Bicomponent Droplets of Methanol and Water, 105: 104
Effects of Momentum Nonequilibrium on Flame Propagation and Extinction in the Presence of Inert Particles, 106: 333
Extinction of Premixed Flames in Turbulent Counterflowing Streams with Unequal Enthalpies, 107: 53
A Flame-Controling Continuation Method for Generating S-Curve Responses with Detailed Chemistry, 104: 328
Flame Propagation in Mixtures of H_2 and Air in a Tube with a Moving Water Film on the Tube's Walls, 107: 45
Flame–Wall Interaction Simulation in a Turbulent Channel Flow, 107: 27
A Heuristic Model of Turbulent Mixing Applied to Blowout of Turbulent Jet Diffusion Flames, 106: 442
Local Extinction Karlovitz Number for Premixed Flames, 106: 515
Quenching Distance of Laminar Flame in Aluminum Dust Clouds, 105: 147
Simulation of Turbulent Burning Velocities Using Aqueous Autocatalytic Reactions in a Near-Homogeneous Turbulence, 105: 54
Study of Radiative Effects on Laminar Counterflow $H_2/O_2/N_2$ Diffusion Flames, 106: 271

20. FLAMES: DIFFUSION
Artificial Neural Network Implementation of Chemistry with pdf Simulation of H_2/CO_2 Flames, 106: 406
Assessment of Turbulent Combustion Submodels Using the Linear Eddy Model, 104: 343
Asymptotic and Numerical Study of Diffusion Flames with Variable Lewis Number and Finite Rate Chemistry, 104: 111
Combustion Measurements from an Impinging Radial Jet Reattachment Flame, 106: 69
Computations of Enhanced Soot Production in Time-Varying CH_4/Air Diffusion Flames, 106: 392
Diffusion-Flame Burning of Fuel-Vapor Pockets in Oxidizer for General Lewis Numbers, 105: 1
Experimental Investigation of the Turbulence Structure of Medium-Scale Methanol Pool Fires, 105: 245
Experimental Study of Stages in Aluminum Particle Combustion in Air, 105: 541
Heat Release Mechanisms in Inhibited Laminar Counterflow Flames, 104: 27
A Heuristic Model of Turbulent Mixing Applied to Blowout of Turbulent Jet Diffusion Flames, 106: 442
Influence of Strain Rate and Fuel Dilution on Laminar Nonpremixed Hydrogen–Air Flame Structure: An Experimental Investigation, 107: 125
Lagrangian Simulation of a Thin Non-Premixed Flame in the Field of an Asymmetric Layer, 106: 41
Laser-Induced Incandescence Measurements of Soot Production in Steady and Flickering Methane, Propane, and Ethylene Diffusion Flames, 107: 418
Magnetic Support of Combustion in Diffusion Flames under Microgravity, 107: 187
Measured Lengths of Supersonic Hydrogen–Air

Jet Flames—Compared to Subsonic Flame Lengths—and Analysis, 107: 176
Mixture Fraction Imaging in a Lifted Methane Jet Flame, 107: 307
On the Eddy Break-Up Coefficient, 104: 208
Preferential Diffusion Effects on the Temperature in Usual and Inverse Diffusion Flames, 106: 252
Relationships among Nitric Oxide, Temperature, Mixture Fraction in Hydrogen Jet Flames, 104: 288
Relationships Between Bifurcation and Numerical Analyses for Ignition of Hydrogen–Air Diffusion Flames, 105: 569
Soot Formation in Hydrocarbon/Air Laminar Jet Diffusion Flames, 105: 132
Soot Nucleation and Growth in Acetylene Air Laminar Coflowing Jet Diffusion Flames, 104: 369
Study of Radiative Effects on Laminar Counterflow $H_2/O_2/N_2$ Diffusion Flames, 106: 271
Synthesis and Restructuring of Inorganic Nanoparticles in Counterflow Diffusion Flames, 107: 85
Thermal and Concentration Fields of Burner-Attached Jet Flames in Cross Flow, 105: 211
Three-Dimensional Modeling for Prediction of Wall Fires with Buoyancy-Induced Flow along a Vertical Rectangular Channel, 105: 391
Turbulence Modulation in Jet Diffusion Flames: Modeling and Experiments, 106: 301

21. FLAMES: NONSTEADY
Effects of Flame Stretch on Premixed Flame Propagation in a Closed Tube, 107: 303
Effects of Ignition and Wind on the Transition to Flame Spread in a Microgravity Environment, 106: 377
Flame Stretch Measurements During the Interaction of Premixed Flames and Kármán Vortex Sheets Using PIV, 105: 167
The Influence of Fuel Composition on Emissions of CO, NO, and NO_2 from a Gas-Fired Pulsed Combustor, 104: 419
Lagrangian Simulation of a Thin Non-Premixed Flame in the Field of an Asymmetric Layer, 106: 41
On the "Tulip Flame" Phenomenon, 105: 225
Premixed Flame Propagation in a High Intensity, Large-Scale Vortical Flow, 106: 29
Response of a Laminar Premixed Flame to Flow Oscillations: A Kinematic Model and Thermoacoustic Instability Results, 106: 487
Response of Counterflow Premixed Flames to Oscillating Strain Rates, 105: 358
Soot Suppression by Ferrocene in Laminar Ethylene/Air Nonpremixed Flames, 105: 528

22. FLAMES: PREMIXED
Acoustic Instability of a Premixed Flame Propagating in a Tube, 107: 245
Analytic Description of the Evolution of Two-Dimensional Flame Surfaces, 107: 114
Burning Velocities, Markstein Lengths, and Flame Quenching for Spherical Methane–Air Flames: A Computational Study, 104: 176
Chemical Structures of Fuel-Rich Flames of trans-$C_2H_2Cl_2$/:CH_4/Ar/O_2 Mixtures, 104: 41
The Detailed Flame Structure of Highly Stretched Turbulent Premixed Methane–Air Flames, 107: 223
Detailed Oxidation Kinetics and Flame Inhibition Effects of Chloromethane, 105: 291
Direct Measurements of Burning Velocity of Propane–Air Using Particle Image Velocimetry, 106: 363
Effect of Swirl on Combustion in a Short Cylindrical Chamber, 106: 318
Effects of Buoyancy on Premixed Flame Stabilization 107: 13
Effects of Flame Stretch on Premixed Flame Propagation in a Closed Tube, 107: 303
Effects of Momentum Nonequilibrium on Flame Propagation and Extinction in the Presence of Inert Particles, 106: 333
An Experimental Investigation of Thermal Mixing and Combustion in Supersonic Flows, 107: 464
Experimental Study of Extinction of Nonadiabatic Counterflow Premixed Flames, 105: 308
Experimental Study of the Structure of Several Fuel-Rich Premixed Flames of Methane, Oxygen, and Argon, 105: 433
Extinction of Premixed Flames in Turbulent Counterflowing Streams with Unequal Enthalpies, 107: 53
Flame Stretch Measurements During the Interaction of Premixed Flames and Kármán Vortex Sheets Using PIV, 105: 167

Flame–Wall Interaction Simulation in a Turbulent Channel Flow, 107: 27
Formation of Polycyclic Aromatic Hydrocarbons (PAH) in Methane: Comparative New Results from Premixed Flames, 107: 141
Infrared Analysis of Flame-Generated PAH Samples, 105: 161
Inhibition of Premixed Methane–Air Flames by Fluoromethanes, 105: 15
Local Extinction Karlovitz Number for Premixed Flames, 106: 515
Low Pressure Flat Flame Studies of C_2F_4/O_2, 107: 475
Modeling and Measurements of Soot and Species in a Laminar Diffusion Flame, 107: 368
A New Heterogeneous Burning Velocity Formula for the Propagation of a Laminar Flame Front Through a Polydisperse Spray of Droplets, 104: 358
An Observation of Near-Planar Spinning Premixed Flames in a Sudden Expansion Tube, 105: 180
On Stretch-Affected Flame Propagation in Vortical Flows, 104: 460
On the Scalar Structure of Nonequidiffusive Premixed Flames in Counterflow, 106: 168
Post-Processing Method for Predicting *NO* Formation in One- and Two-Dimensional Premixed Methane–Air Flames, 107: 65
Premixed Combustion in Laminar Couette Flow, 104: 241
Premixed Flame Propagation in a High-Intensity, Large-Scale Vortical Flow, 106: 29
Quenching Distance of Laminar Flame in Aluminum Dust Clouds, 105: 147
Raman-LIF Measurements of Temperature, Major Species, OH, and NO in a Methane–Air Bunsen Flame, 105: 499
Response of a Laminar Premixed Flame to Flow Oscillations: A Kinematic Model and Thermoacoustic Instability Results, 106: 487
Scaling in Buoyancy-Driven Turbulent Premixed Flames, 105: 28
Simultaneous Scaler/Velocity Field Measurements in Turbulent Gas-Phase Flows, 107: 1
Stabilization of Premixed Flames on Rotating Bunsen Burners, 106: 467
Stochastic Description of Premixed Turbulent Combustion in Terms of a Coarse-Grained Flame Surface Density, 106: 369
Unsteady Strain Rate and Curvature Effects in Turbulent Premixed Methane–Air Flames, 106: 184

23. FLAMES: TURBULENT

Analytic Description of the Evolution of Two-Dimensional Flame Surfaces, 107: 114
Application of Front Tracking Techniques to the Turbulent Combustion Processes in a Single Stroke Device, 106: 11
Artificial Neural Network Implementation of Chemistry with pdf Simulation of H_2/CO_2 Flames, 106: 406
Assessment of Turbulent Combustion Submodels Using the Linear Eddy Model, 104: 343
Combustion Measurements from an Impinging Radial Jet Reattachment Flame, 106: 69
Computation of Steady-State and Transient Premixed Turbulent Flames Using pdf Methods, 104: 481
Deflagration to Detonation Transition in Large Confined Volume of Lean Hydrogen–Air Mixtures, 104: 95
The Detailed Flame Structure of Highly Stretched Turbulent Premixed Methane–Air Flames, 107: 223
Effect of Swirl on Combustion in a Short Cylindrical Chamber, 106: 318
Effects of Buoyancy on Premixed Flame Stabilization, 107: 13
Experimental Investigation of the Turbulence Structure of Medium-Scale Methanol Pool Fires, 105: 245
A Heuristic Model of Turbulent Mixing Applied to Blowout of Turbulent Jet Diffusion Flames, 106: 442
Measured Lengths of Supersonic Hydrogen–Air Jet Flames—Compared to Subsonic Flame Lengths—and Analysis, 107: 176
Mixture Fraction Imaging in a Lifted Methane Jet Flame, 107: 307
On the Eddy Break-Up Coefficient, 104: 208
Relationships among Nitric Oxide, Temperature, Mixture Fraction in Hydrogen Jet Flames, 104: 288
Scaling in Buoyancy-Driven Turbulent Premixed Flames, 105: 28
Simulation of Turbulent Burning Velocities Using Aqueous Autocatalytic Reactions in a Near-Homogeneous Turbulence, 105: 54
Simultaneous Scalar/Velocity Field Measurements in Turbulent Gas-Phase Flows, 107: 1

Stochastic Description of Premixed Turbulent Combustion in Terms of a Coarse-Grained Flame Surface Density, 106: 369
Three-Dimensional Modeling for Prediction of Wall Fires with Buoyancy-Induced Flow along a Vertical Rectangular Channel, 105: 391
Turbulence Modulation in Jet Diffusion Flames: Modeling and Experiments, 106: 301
Unsteady Strain Rate and Curvature Effects in Turbulent Premixed Methane–Air Flames, 106: 184

24. FLAMMABILITY

25. FLUID DYNAMICS: STEADY FLOW

26. FLUID DYNAMICS: NONSTEADY AND INSTABILITY
Acoustic Instability of a Premixed Flame Propagating in a Tube, 107: 245
Numerical Modeling of Chemistry and Gas Dynamics During Shock-Induced Ethylene Combustion, 104: 311
On the "Tulip Flame" Phenomenon, 105: 225
Unsteady Strain Rate and Curvature Effects in Turbulent Premixed Methane–Air Flames, 106: 184

27. FLUID DYNAMICS: TURBULENT
Computation of Steady-State and Transient Premixed Turbulent Flames Using pdf Methods, 104: 481
An Experimental Investigation of Thermal Mixing and Combustion in Supersonic Flows, 107: 464
Experimental Investigation of the Turbulence Structure of Medium-Scale Methanol Pool Fires, 105: 245
Extinction of Premixed Flames in Turbulent Counterflowing Streams with Unequal Enthalpies, 107: 53
Flame–Wall Interaction Simulation in a Turbulent Channel Flow, 107: 27

28. FUELS, OXIDIZERS AND ADDITIVES, NONCONVENTIONAL
An Analysis of Multiple Flames in Counterflow Spray Combustion, 104: 431
Heat Release Mechanisms in Inhibited Laminar Counterflow Flames, 104: 27
Influence of Cerium Oxide on the Formation and Oxidation of Soot, 104: 199
Kinetic Parameters for Heterogeneous Boron Combustion Reactions via the Cluster Beam Approach, 105: 68
Soot Suppression by Ferrocene in Laminar Ethylene/Air Nonpremixed Flames, 105: 528

29. HETEROGENEOUS COMBUSTION: AEROSOLS, SPRAYS AND AIRBORNE DUSTS
An Analysis of Multiple Flames in Counterflow Spray Combustion, 104: 431
Heating and Ignition of Combustible Dust Layers on a Hot Surface: Influence of Layer Shrinkage, 105: 471
Infrared Measurements of Soot Formation in Diesel Sprays, 107: 271
A New Heterogeneous Burning Velocity Formula for the Propagation of a Laminar Flame Front Through a Polydisperse Spray of Droplets, 104: 358
Quenching Distance of Laminar Flame in Aluminum Dust Clouds, 105: 147
Synthesis and Restructuring of Inorganic Nano-Particles in Counterflow Diffusion Flames, 107: 85

30. HETEROGENEOUS COMBUSTION: CATALYTIC COMBUSTION
Catalytic Stabilization of Lean Premixed Combustion: Method for Improving NO_x Emissions, 105: 322
On the Structure of Nonsooting Counterflow Ethylene and Acetylene Diffusion Flames, 107: 321

31. HETEROGENEOUS COMBUSTION: COAL, CHAR OR CARBON
The Amounts of NO_x and N_2O Formed in a Fluidized Bed Combustor during the Burning of Coal Volatiles and Also of Char, 105: 341
The Attachment of the Flame Sheet to the Carbon Surface in a Carbon Combustion Model: On the Surface Constraining Conditions, 105: 35
Diagnostics and Modeling of Strained Fuel-Rich Acetylene/Oxygen Flames Used for Diamond Deposition, 105: 321
Distributed Activation Energy Model of Heterogeneous Coal Ignition, 107: 291
Fragmentation of Highly Porous Char Particles Burning in Regime I, 106: 203

Fuel–Gas Injection to Reduce N_2O Emissions from the Combustion of Coal in a Fluidized Bed, 107: 103
Influence of Cerium Oxide on the Formation and Oxidation of Soot, 104: 199
The Influence of Heterogeneous Kinetics and Thermal Radiation on the Oxidation of Graphite Particles, 104: 81
Inhibition of Premixed Methane–Air Flames by Fluoromethanes, 105: 15
Microstructural Evolution of Char Under Oxidation Induced by Uneven Heating, 105: 80
Modeling NO_x Release from a Single Coal Particle. I.: Formation of NO from Volatile Nitrogen, 105: 92
NO and N_2O Formation During Char Combustion: Is It HCN or Surface Attached Nitrogen?, 104: 213
Numerical Simulation of Laser Ignition of an Isolated Carbon Particle in Quiescent Environment, 105: 591
On the Formation of Liquid Melts of CaS and $CaSO_4$ and their Importance in the Absorption of SO_2 by CaO, 106: 359
The Rate of Temperature Rise of a Subbituminous Coal During Spontaneous Combustion in an Adiabatic Device: The Effect of Moisture Content and Drying Methods, 106: 261
The Ratio CO/CO_2 of Oxidation on a Burning Carbon Surface, 107: 197
Release of NO from the Combustion of Coal Chars, 107: 336
Simultaneous Drying and Pyrolysis of Solid Fuel Particles, 106: 288
Soot Nucleation and Growth in Acetylene Air Laminar Coflowing Jet Diffusion Flames, 104: 369

32. HETEROGENEOUS COMBUSTION: SINGLE DROPLET OR PARTICLE
Application of Rate-Ratio Asymptotics to the Prediction of Extinction for Methanol Droplet Combustion, 105: 267
The Effect of Liquid Mass Transport on the Combustion and Extinction of Bicomponent Droplets of Methanol and Water, 105: 104
Emission Spectra of Burning Iron in High-Pressure Oxygen, 104: 32
Experimental Study of Stages in Aluminum Particle Combustion in Air, 105: 541
The Influence of Heterogeneous Kinetics and Thermal Radiation on the Oxidation of Graphite Particles, 104: 81
Measurements of Particle Flame Temperatures Using Three-Color Optical Pyrometry, 104: 272
Microstructural Evolution of Char Under Oxidation Induced by Uneven Heating, 105: 80
Modeling NO_x Release from a Single Coal Particle. I.: Formation of NO from Volatile Nitrogen, 105: 92
Modeling NO_x Release from a Single Coal Particle II. Formation of NO from Char-Nitrogen, 106: 207
Simultaneous Drying and Pyrolysis of Solid Fuel Particles, 106: 288

33. HETEROGENEOUS COMBUSTION: SLAB, POOL, FLUIDIZED BED, ETC.
The Amounts of NO_x and N_2O Formed in a Fluidized Bed Combustor during the Burning of Coal Volatiles and Also of Char, 105: 341
The Effect of Solid CaO on the Production of NO_x and N_2O in Fluidized Bed Combustors: Studies Using Pyridine as a Prototypical Nitrogenous Fuel, 105: 511
Effects of Ignition and Wind on the Transition to Flame Spread in a Microgravity Environment, 106: 377
An Experimental and Modeling Study of Fires in Ventilated Ducts. Part II: PMMA and Stratification, 104: 138
Fuel–Gas Injection to Reduce N_2O Emissions from the Combustion of Coal in a Fluidized Bed, 107: 103
Kinetic Parameters for Heterogeneous Boron Combustion Reactions via the Cluster Beam Approach, 105: 68
Modeling of Chemical Reactions in Afterburning for the Reduction of N_2O, 106: 345
Modeling of Graphite Oxidation in a Stagnation-Point Flow Field Using Detailed Homogeneous and Semiglobal Heterogeneous Mechanisms with Comparisons to Experiments, 104: 469
Modeling of Normal and Erosive Burning Rate of a Hot Double-Base Homogenous Propellant, 105: 202
NO and N_2O Formation During Char Combustion: Is It HCN or Surface Attached Nitrogen?, 104: 213

A Simplified Theory for de Ris Flames Over Thick and Thin Fuel Beds, 104: 66

34. INHIBITION
Heat Release Mechanisms in Inhibited Laminar Counterflow Flames, 104: 27
Influence of CF_3I, CF_3Br, and CF_3H on the High-Temperature Combustion of Methane, 107: 351
Numerically Predicted Structure and Burning Velocity of Premixed CO–Ar–O_2–H_2 Flames Inhibited by Cf_3H, 107: 72

35. IONIZATION AND/OR ELECTRICAL EFFECTS
Experimental Study of Stages in Aluminum Particle Combustion in Air, 105: 541
Magnetic Support of Combustion in Diffusion Flames under Microgravity, 107: 187

36. KINETICS AND/OR REACTION MECHANISMS: DETAILED
Chemical Kinetic Simulation of Hydrocarbon Oxidation Through the Exhaust Port of a Spark Ignition Engine, 107: 383
Computations of Enhanced Soot Production in Time-Varying CH_4/Air Diffusion Flames, 106: 392
A Detailed Kinetic Model of the High-Temperature Pyrolysis of Tetrachloroethene, 104: 260
A Detailed Kinetic Model of the High-Temperature Pyrolysis of Tetrachloroethene (Erratum), 107: 193
Detailed Oxidation Kinetics and Flame Inhibition Effects of Chloromethane, 105: 291
Determination of Ignition Delay Times in Mixtures of Ethylene Oxide, Oxygen, and Argon Behind a Reflected Shock, 106: 81
The Effect of Allene Addition on the Structure of a Rich: $C_2/H_2/O_2$/Ar Flame, 105: 451
Ethane Oxidation at Elevated Pressures in the Intermediate Temperature Regime: Experiments and Modeling, 104: 505
Experimental Study of the Structure of Several Fuel-Rich Premixed Flames of Methane, Oxygen, and Argon, 105: 433
Flash Pyrolysis of Hydroxyl-Terminated Polybutadiene (HTPB) I: Analysis and Implications of the Gaseous Products, 106: 131
Flash Pyrolysis of Hydroxyl-Terminated Polybutadiene (HTPB) II:Implications of the Kinetics to Combustion of Organic Polymers, 106: 144
A Flow-Reactor Mass-Spectrometer Investigation of the Initiation Steps of the $O(^3P)$ Atom Reaction with Benzene, 105: 239
The High-Temperature Pyrolysis of 1,3-Hexachlorobutadiene, 106: 1
The High-Temperature Pyrolysis of Hexachloropropene: Kinetic Analysis of Pathways to Formation of Perchloroarylbenzenes, 105: 486
Ignition in Nonpremixed Counterflowing Hydrogen versus Heated Air: Computational Study with Detailed Chemistry, 104: 157
Influence of CF_3I, CF_3Br, and CF_3H on the High-Temperature Combustion of Methane, 107: 351
Kinetic Parameters for Heterogenous Boron Combustion Reactions via the Cluster Beam Approach, 105: 68
Kinetic Studies of Fluorine Atom Abstraction by Ground State Atomic Cesium, Cs ($6^2S_{1/2}$), Using Time-Resolved Laser-Induced Fluorescence [$Cs7^2P_{3/2} - 6^2S_{1/2}$), λ = 455.5 nm] Following Pulsed Irradiation, 107: 299
Low Pressure Flat Flame Studies of C_2F_4/O_2, 107: 475
Methanol and Hydrogen Oxidation Kinetics in Water at Supercritical States, 106: 110
Modeling of Chemical Reactions in Afterburning for the Reduction of N_2O, 106: 345
Modeling of Graphite Oxidation in a Stagnation-Point Flow Field Using Detailed Homogeneous and Semiglobal Heterogeneous Mechanisms with Comparisons to Experiments, 104: 469
Nitrous Oxide Emissions, 107: 453
Numerically Predicted Structure and Burning Velocity of Premixed CO–Ar–O_2–H_2 Flames Inhibited by Cf_3H, 107: 72
On the Scalar Structure of Nonequidiffusive Premixed Flames in Counterflow, 106: 168
On the Structure of Nonsooting Counterflow Ethylene and Acetylene Diffusion Flames, 107: 321
The Oxidation of Ethylene Oxide in a Jet-Stirred Reactor and Its Ignition in Shock Waves, 106: 62
Post-Processing Method for Predicting *NO*

Formation in One- and Two-Dimensional Premixed Methane–Air Flames, 107: 65
Preferential Diffusion Effects on the Temperature in Usual and Inverse Diffusion Flames, 106: 252
The Pyrolysis of Para-Toluene Isocyanate, 107: 260
Shock Tube and Modeling Study of Ketene Oxidation, 106: 155
Shock-Tube Modeling Study of Acetylene Pyrolysis and Oxidation, 107: 401
Soot Formation in Shock-Tube Pyrolysis of Toluene, Toluene–Methanol, Toluene–Ethanol, and Toluene–Mixtures, 104: 51
The Temperature Dependence of H + OH Recombination in Phosphorus Oxide Containing Post-Combustion Gases, 105: 407

37. KINETICS AND/OR REACTION MECHANISMS: OVERALL
The Attachment of the Flame Sheet to the Carbon Surface in a Carbon Combustion Model: On the Surface Constraining Conditions, 105: 35
Computation of Steady-State and Transient Premixed Turbulent Flames Using pdf Methods, 104: 481
Distributed Activation Energy Model of Heterogenous Coal Ignition, 107: 291
Methanol and Hydrogen Oxidation Kinetics in Water at Supercritical States, 106: 110
Numerical Modeling of Chemistry and Gas Dynamics During Shock-Induced Ethylene Combustion, 104: 311
Raman-LIF Measurements of Temperature, Major Species, OH, and NO in a Methane–Air Bunsen Flame, 105: 499
The Ratio CO/CO_2 of Oxidation on a Burning Carbon Surface, 107: 197
Species Measurements in a Hypersonic, Hydrogen–Air, Combustion Wake, 106: 478

38. POLLUTANTS: INORGANICS AND SOOT
Computations of Enhanced Soot Production in Time-Varying CH_4/Air Diffusion Flames, 106: 392
Diagnostics and Modeling of Strained Fuel-Rich Acetylene/Oxygen Flames Used for Diamond Deposition, 105: 321
The Effects of Cofiring Natural Gas and Coal on Sulfur Retention in Ash, 106: 231
The Elusive History of $\tilde{m} = 1.57 - 0.56i$ for the Refractive Index of Soot, 107: 314
Formation of Polycyclic Aromatic Hydrocarbons (PAH) in Methane: Comparative New Results from Premixed Flames, 107: 141
Influence of Cerium Oxide on the Formation and Oxidation of Soot, 104: 199
Infrared Measurements of Soot Formation in Diesel Sprays, 107: 271
Laser-Induced Incandescence Calibration via Gravimetric Sampling, 105: 462
Laser-Induced Incandescence Measurements of Soot Production in Steady and Flickering Methane, Propane, and Ethylene Diffusion Flames, 107: 418
Modeling and Measurements of Soot and Species in a Laminar Diffusion Flame, 107: 368
Soot Formation in Hydrocarbon/Air Laminar Jet Diffusion Flames, 105: 132
Soot Nucleation and Growth in Acetylene Air Laminar Coflowing Jet Diffusion Flames, 104: 369
Soot Suppression by Ferrocene in Laminar Ethylene/Air Nonpremixed Flames, 105: 528

39. POLLUTANTS: NO_x
The Amounts of NO_x and N_2O Formed in a Fluidized Bed Combustor during the Burning of Coal Volatiles and Also of Char, 105: 341
Catalytic Stabilization of Lean Premixed Combustion: Method for Improving NO_x Emissions, 105: 322
The Effect of Solid CaO on the Production of NO_x and N_2O in Fluidized Bed Combustors: Studies Using Pyridine as a Prototypical Nitrogenous Fuel, 105: 511
Fuel–Gas Injection to Reduce N_2O Emissions from the Combustion of Coal in a Fluidized Bed, 107: 103
The Influence of Fuel Composition on Emissions of CO, NO, and NO_2 from a Gas-Fired Pulsed Combustor, 104: 419
Influences of Flame–Vortex Interactions on Formation of Oxides of Nitrogen in Curved Methane–Air Diffusion Flames, 105: 373
Minimization of NO During Staged Combustion of CH_3NH_2, 105: 557

Modeling NO_x Release from a Single Coal Particle. I.: Formation of NO from Volatile Nitrogen, 105: 92
Modeling NO_x Release from a Single Coal Particle II. Formation of NO from Char-Nitrogen, 106: 207
Modeling of Chemical Reactions in Afterburning for the Reduction of N_2O, 106: 345
Nitrogen Chemistry During Burnout in Fuel-Staged Combustion, 107: 211
Nitrous Oxide Emissions, 107: 453
NO and N_2O Formation During Char Combustion: Is It HCN or Surface Attached Nitrogen?, 104: 213
NO_x Emission and Major Species Concentrations in Partially Premixed Laminar Methane/Air Co-Flow Jet Flames, 105: 414
1-Pentene Oxidation and Its Interaction with Nitric Oxide in the Low and Negative Temperature Coefficient Regions, 104: 377
Post-Processing Method for Predicting *NO* Formation in One- and Two-Dimensional Premixed Methane–Air Flames, 107: 65
Release of NO from the Combustion of Coal Chars, 107: 336

40. POLLUTANTS: OTHER
Infrared Analysis of Flame-Generated PAH Samples, 105: 161
On the Formation of Liquid Melts of CaS and $CaSO_4$ and their Importance in the Absorption of SO_2 by CaO, 106: 359

41. PROPELLANTS: PYROTECHNICS AND EXPLOSIVES
Comments on "Kinetic Parameters of Composite Propellants from Thermogravimetric Data" by V. K. Rao, M. F. Bardon, and R. A. Stow, 105: 242
Concentration and Temperature Measurements in a Laser-Induced High Explosive Ignition Zone. Part I: LIF Spectroscopy Measurements, 105: 381
Effect of Confinement and Thermal Cycling on the Shock Initiation of LX-17, 105: 43
High Strain-Rate Impact Studies of Predamaged Rocket Propellants. I. Characterization of Damage Using a Cumulative Damage Failure Criterion, 104: 524
Ignition of a Granular Propellant Bed, 106: 219
Modeling of Normal and Erosive Burning Rate of a Hot Double-Base Homogenous Propellant, 105: 202
Reply to Comments by A. R. Shouman on "Kinetic Parameters of Composite Propellants from Thermogravimetric Data," 105: 243
Shock Initiation of a Heated Ammonium Perchlorate-Based Propellant, 105: 123
Simulation and Moderation of the Thermal Response of Confined Pressed Explosive Compositions, 106: 428
Study of the Fast Reaction Characteristics of Aluminized PETN Explosive Powders, 105: 428

42. PYROLYSIS AND THERMAL DECOMPOSITION
Comparative Evaluation of Municipal Solid Waste Incinerator Designs by Flow Simulation, 106: 241
A Detailed Kinetic Model of the High-Temperature Pyrolysis of Tetrachloroethene, 104: 260
A Detailed Kinetic Model of the High-Temperature Pyrolysis of Tetrachloroethene (Erratum), 107: 193
Flash Pyrolysis of Hydroxyl-Terminated Polybutadiene (HTPB) I: Analysis and Implications of the Gaseous Products, 106: 131
Flash Pyrolysis of Hydroxyl-Terminated Polybutadiene (HTPB) II: Implications of the Kinetics to Combustion of Organic Polymers, 106: 144
Forward Smolder of Polyurethane Foam in a Forced Air Flow, 106: 89
The High-Temperature Pyrolysis of Hexachloropropene: Kinetic Analysis of Pathways to Formation of Perchloroarylbenzenes, 105: 486
Influence of Cerium Oxide on the Formation and Oxidation of Soot, 104: 199
The Pyrolysis of Para-Toluene Isocyanate, 107: 260
Shock-Tube Modeling Study of Acetylene Pyrolysis and Oxidation, 107: 401
Simultaneous Drying and Pyrolysis of Solid Fuel Particles, 106: 288
Soot Formation in Shock-Tube Pyrolysis of Toluene, Toluene–Methanol, Toluene–Ethanol, and Toluene–Mixtures, 104: 51

43. RADIATION SPECTRA AND EXCITED SPECIES
Concentration and Temperature Measurements in a Laser-Induced High Explosive Ignition Zone. Part I: LIF Spectroscopy Measurements, 105: 381
The Elusive History of $\tilde{m} = 1.57 - 0.56i$ for the Refractive Index of Soot, 107: 314
Emission Spectra of Burning Iron in High-Pressure Oxygen, 104: 32
Study of Radiative Effects on Laminar Counterflow $H_2/O_2/N_2$ Diffusion Flames, 106: 271
Study of the Fast Reaction Characteristics of Aluminized PETN Explosive Powders, 105: 428

44. SMOLDERING AND LOW TEMPERATURE OXIDATION-NONE
Downward Buoyant Filtration Combustion, 107: 151
An Elementary Discussion of Forward Smoldering, 104: 300
Forced Forward Smolder Combustion, 104: 1
Forward Smolder of Polyurethane Foam in a Forced Air Flow, 106: 89
1-Pentene Oxidation and Its Interaction with Nitric Oxide in the Low and Negative Temperature Coefficient Regions, 104: 377

45. THERMOCHEMISTRY AND THERMODYNAMICS
On the Formation of Liquid Melts of CaS and $CaSO_4$ and their Importance in the Absorption of SO_2 by CaO, 106: 359

46. TRANSPORT OF HEAT AND MASS
The Effect of Liquid Mass Transport on the Combustion and Extinction of Bicomponent Droplets of Methanol and Water, 105: 104
Further Studies on Effects of Thermophoresis on Seeding Particles in LDV Measurements of Strained Flames, 105: 189
Microstructural Evolution of Char Under Oxidation Induced by Uneven Heating, 105: 80
The Rate of Temperature Rise of a Subbituminous Coal During Spontaneous Combustion in an Adiabatic Device: The Effect of Moisture Content and Drying Methods, 106: 261
Simultaneous Drying and Pyrolysis of Solid Fuel Particles, 106: 288
